

# BodyFIX<sup>®</sup> Angio

by Medical Intelligence

**MEDICAL  
INTELLIGENCE**

- Provides Stable Patient Immobilization
- Eliminates Motion Artifacts
- Insures Consistent Image Quality
- Reduces Radiation Exposure
- Increases Clinical Efficiency

# BodyFIX® Angio

## Patient Immobilization for Diagnostic and Interventional Procedures

Stable immobilization of the patient is essential for both diagnostic and therapeutic angiography. Artifacts due to patient motion can compromise DSA image quality. If repeat series are necessary due to motion artifacts this then adds to both patient radiation exposure and the quantity of contrast media administered. BodyFIX® Angio brings additional efficiency to the angio suite by eliminating the need for redundant imaging procedures and unnecessary pixeling of image data. BodyFIX® Angio is part of the Premium Positioning Systems from Medical Intelligence.

## BodyFIX® Angio

### Features & Benefits:

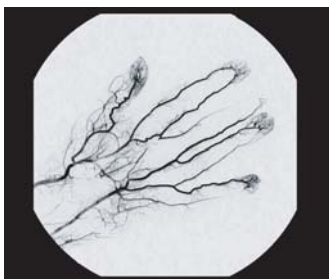

- Our advanced vacuum technology offers quick, safe, comfortable and effective immobilization of the extremities
- Eliminate motion artifacts due to involuntary movement caused by injection of contrast media
- Insure consistent high quality images throughout both diagnostic and therapeutic angiography
- Increase efficiency within the clinic by eliminating series repetitions, administration of additional contrast media and image pixeling
- By eliminating series repetitions due to motion artifacts BodyFix® Angio reduces radiation exposure to both the patient and the clinician
- Can be used in various imaging procedures including Interventional CT, MRI Angiography, PET, SPECT and Ultrasound Guided Interventions
